ALUMINUM CHAMBERED BOATS RAMPS UP ITS FOCUS ON RECREATIONAL BOATING

Aluminum Chambered Boats (ACB), Inc. Bellingham, Wash. (April 18, 2007) – For two years ACB quietly manufactured 14' boats in a 2,000 sq ft building in the little town of Fairhaven, in Bellingham Washington. Then the entire world woke up to the tragic news of 9/11, and suddenly ACB propelled itself into the world of homeland security. Responding to our country's needs for security with the willingness to revamp the design of its boats and incorporate innovative technology to meet the specific mission needs of the military caught the attention of The Naval Sea Systems Command (NAVSEA) and soon they declared ACB's products "Urgent Mission Essential". A partial list of ACB's elite customers includes U.S. Marine Corps, U.S. Navy, U.S. Border Patrol, NOAA, U.S. Corp of Engineers, U.S. Air Force, several state and local municipalities and most recently a partnership with Northrop Grumman. This latest partnership will explore future combat system requirements and capabilities for the U.S. Navy's anticipated Riverine/Coastal Warfare program as well as future international opportunities.

Sport Fish

Knowing recreational boaters would benefit from the safety innovations of their products ACB took the advanced hull technology that has been built to stringent military requirements and, using the same high standards, now builds a line of recreational/fishing boats from 25-32'. The patented aluminum chambered hull design is a modified V hull with contiguous airtight aluminum chambers that provide critical survivability flotation and stability. ACB has successfully developed unsurpassed performance characteristics in speed, safety, endurance and maneuverability, as well as lowering total operating costs for customers thanks to the rugged hull structure, easy maintenance and reduced fuel burn.

So who is ACB? It is the company that performs severe drop tests from 30' in the air onto the concrete, drills several holes in the hull and then haphazardly shoves it in the water over large rocks to prove it will still float. It is the company that believes survivability flotation should be standard no matter what size a boat is and insists that all boaters deserve superior safety on the water – anything less is unacceptable.

You are invited to tour our factory and experience the ride of an ACB. Come see why ACB is ramping up its focus on recreational boaters – because they deserve the same high standards.

For additional information or to schedule time on an ACB, please contact Laura Kaestner at (360) 647-0345.

Aluminum Chambered Boats Inc. is an aluminum boat manufacturer headquartered in Bellingham, Wash. ACB provides rugged state-of-the-art high performance aluminum boats to Government, Recreational and Commercial customers on a global basis.
